

Desktop Video Conferencing Software

The Sagaxis Desktop Video Conferencing (DVC) Software is the highest quality IP-based H.323 multi-party standalone video conferencing software application available. DVC lets you dynamically communicate with your colleagues and clients across any IP network without the need for a conference bridge or Multi-Party Control Unit (MCU).

Sagaxis DVC is designed to take the complexity out of establishing multi-party video conferences, reduce costs and provide a more effective and dynamic means for personal and business communication.

- Provide a robust, virtual meeting environment from the desktop with high-quality video and audio.
- Conferences can be quickly set up on existing IP networks.
- Independent desktop platform eliminates need for dedicated server and saves costs associated with buying and maintaining an MCU or conference bridge.
- Includes online license server support from Sagaxis to manage desktop licenses and subscription options.
- Compatible with standard desktop digital video cameras and webcams.

Key Features

- Intuitive user interface enables quick and simple conference set up.
- Wavelet and H.263+ video compression.
- Conference group and address lists simplifies set up and management of conference participants.
- Advanced bandwidth and call management tools include manual bandwidth over-ride to change frame rate and video quality reception.
- Gatekeeper functionality enables participants to easily find each other via active email address lists.

Minimum System Requirements

Pentium III (750 MHz) or higher, 128 Mb RAM, 20 Mb free disk space, 16 Mb Video, 16K Color, web cam and microphone.

Operating Systems

Windows 98 SE, 2000, ME or XP.

Sagaxis DVC supports an unlimited number of potential applications. Some of the most popular are:

- Instantaneous virtual meetings that save time and reduce travel costs.
- Departmental collaboration: initiate online meetings with a mouse click.
- Distance learning: teachers can deliver courses and interact with students on a real-time basis.
- Time shift conferences: why sit through an entire conference when you are only required for part of the meeting? DVC lets you participate as required from your own desk.

Unique Product Benefits

- No Multi-Party Conference Bridge or other expensive hardware required.
- ITU standards compliant (H.323).
- Software only implementation.
- Includes both Wavelet and H.263 video CODECs.
- Designed specifically for broadband and corporate IP networks.
- High quality video conferencing from 56 Kbps to T1 (1.544 Mbps) rates.
